

**Preventative Maintenance Checklist**

**Washing Machines**

- Check fill cycle and water temperature for wash settings.
- Ensure correct pump out and spin cycles.
- Check for excessive noise and vibration during spin cycle.
- Check timer for correct operation.
- Inspect belt for wear and adjust tension (belt drive washers).
- Check clutch adjustment and spin speed.
- Inspect electrical system for proper ground and secure connections.
- Check tub and hoses for leaks.
- Check drain pipe or laundry tub.
- Inspect motor coupling for wear. Replace as needed (direct drive washers).
- Check level of machine.
- Check fill and drain hoses for proper connection.

**Dryers**

- Check the rear drum seal.
- Check the drum belt, idler pulley and support rollers for wear.
- Check exhaust system for leaks.
- Cycle check the burner for proper ground and secure connections.
- Inspect electrical systems for proper ground and secure connections.
- Check thermostat temperatures.
- Check time for correct cycle operation.
- Check gas line and connections for leaks.
- Check machine component functions by operating dryer through short cycle.
- Check level of machine.
- Clean dryer.
